May 2024

Work on the new Catterick Integrated Care Campus is now well underway and you will soon be able to see the shape of the new building emerging. Here's an update on the work taking place from the team on site.

Piling has been completed on site

The steel frame installation has begun

What's been happening on site?

- The piling work has now finished and the piling rigs have left the site.
- We are currently finishing work on the installation of pile caps and foundations, this work will be concluded over the next couple of weeks and will provide a stable base for the new steel frame.
- Installation of the steelwork has now started. This will take around three months including installation of the precast concrete planks, which will make up the floor slabs of the new building, as well as precast stairs and lift shafts.

The steel frame will take about three months to complete

The footprint of the building can now be made out in the overall site

Steel deliveries will continue for a few weeks

What's coming next?

- Work on the steelwork will continue into the summer, once this is complete you will be able to see the scale of the new building.
- We will be continuing to install the drainage for the new integrated care campus.

Work has commenced on laying the base layers to the roads and car parking areas

Social Value

As part of the Integrated Care Campus project we are committed to ensuring the project benefits local people, by creating new employment, working with local schools and colleges, using a local supply chain and engaging with local community groups.

The Tilbury Douglas stand at the BFRS Careers Event

BFRS Careers Event

Back in April our team attended the British Forces Resettlement Service (BFRS) careers event at the Catterick Leisure Centre. Members of our team spoke to visitors about potential careers in construction and the different options available.

Bird Feeders

Students at a local dance school recently helped to recycle plastic bottles, collected from the site team, into bird feeders. These feeders have now been placed around the site.

OPEN DOORS

Get into Construction Open Doors

Back in March we hosted two Build UK Open Doors events. These events are designed to take people behind the scenes on construction sites, showcasing the fantastic range of careers available. Our team had visits from students at Bishop Auckland College, who wanted to find out more about the project and will hopefully come back in the future once work has progressed.

Project Manager Mark Bennison leads the Open Doors visit

Children from Le Cateau Primary School next to their safety posters on the site hoardings

Le Cateau Primary School site visit

Our team have been working with pupils from Le Cateau Primary School to tell them about the construction of the new building and deliver an awareness talk about being safe around construction sites. As part of this, pupils designed their own safety posters, which are now displayed on the site hoardings. Back in April pupils visited the site to see their artwork and were able to speak to some of the team about the works taking place. We will be inviting pupils back again as work progresses.

CONSIDERATE
CONSTRUCTORS
SCHEME

Considerate Constructors Scheme

In May we had our first Considerate Constructors Scheme monitor visit, where our team were assessed and scored against the Code of Considerate Practice. We're delighted to say that we scored a fantastic 42/45!
